DETAILED ACTION

This is a Restriction and an Election of Species for application number 10/717,114 Removable Balancing Assembly for Rotating Cylindrical Structures filed on 10/19/03. Claims 1-8 are subject to election/restriction.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, 7 and 8, drawn to a Self-aligning Flange, classified in class 248, subclass 62.
- II. Claims 5 and 6, drawn to a cutting apparatus, classified in class 83 subclass 78.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the cutting assembly does not require the aligning flange in order to be operable. The subcombination has separate utility such as a bracket for holding a pipe.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Art Unit: 3632

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
